PRODUCTS

Utility linemen need to be able to focus on restoring customer service regardless of the weather conditions. And, they need foul weather gear that protects them and enables them to work for longer periods without being distracted by discomfort in cold or wet conditions. Rainwear made with GORE[®] PYRAD[®] fabric provides the best combination of broad protection, comfort, and durability for arc-flash rated, foul-weather protection applications.

Broad Protection: Arc flash and Hi-Vis

GORE[®] PYRAD[®] fabrics deliver protection beyond ASTM F1891 requirements. Its revolutionary self-extinguishing properties enable the fabric to maintain its physical integrity even after direct exposure to flame.

Rainwear made with GORE[®] PYRAD[®] fabric passes ANSI 107 hi-visibility requirements to improve safety during exposure to traffic hazards.

Broad Protection: Comfort in challenging storm conditions

Proven in wear trials to be more durable than impermeable rain suits, the GORE[®] PYRAD[®] fabric, which is offered by the inventors of GORE-TEX[®] fabrics, ensures the expectations for waterproof, windproof, breathable performance are met. Its highly breathable construction helps decrease sweat build-up, keeping linemen cooler in warm conditions and warmer in cool conditions.

This lightweight fabric dries to the touch after a short period of time, reducing the uncomfortable cold, clammy feeling from reusing damp foul weather gear multiple times during a shift.

Benefits of GORE[®] PYRAD[®] Fabric

- Durable arc-resistant rainwear with performance beyond ASTM F1891 requirements
- Added comfort from high breathability that limits sweat buildup
- Storm-shower tested and field proven to ensure that lineman stays dry
- Reduced bulk with integrated ANSI 107 hi-visibility compliance, eliminating the need for an additional vest
- Longer garment life due to superior resistance to delamination
- Reliable protection even after multiple cleaning cycles
